

# BISHAL ADHIKARI

Senior IAM Engineer | SailPoint IdentityIQ | Identity Governance

New York, NY · (917) 549-0505 · bishaladk20@gmail.com · [linkedin.com/in/bishaladhihari7](https://www.linkedin.com/in/bishaladhihari7)

## PROFESSIONAL SUMMARY

---

Senior IAM engineer with 8+ years in identity governance across healthcare, financial services, and retail. Most of that time has been inside SailPoint IdentityIQ: writing BeanShell and Java rules, building custom connectors, running version upgrades through CI/CD, and automating joiner, mover, and leaver processing from Workday into Active Directory. Also work across CyberArk PAM, the federation layer (SAML 2.0, OAuth 2.0, OIDC), and the access certification campaigns that feed periodic access reviews.

## TECHNICAL SKILLS

---

**SailPoint / Identity Governance:** IdentityIQ 7.x and 8.x (8.2 through 8.4), Identity Security Cloud / IdentityNow, BeanShell and Java rule development (correlation, before and after provisioning, field value, identity attribute, certification exclusion), custom connector development, joiner/mover/leaver lifecycle, RBAC and role mining, SoD policy, access certification campaigns, aggregation and identity refresh tuning

**Privileged Access:** CyberArk PAM, IdentityIQ to CyberArk integration, just-in-time privilege elevation, privileged account onboarding

**Sources, Targets & Integrations:** Workday, Active Directory, Microsoft Entra ID, ServiceNow, SAP, Epic, JDBC, REST API, Web Services, delimited file, SCIM, AWS and Azure identity integration

**Authentication & Federation:** SAML 2.0, OAuth 2.0, OpenID Connect

**Development & Platform:** Java, BeanShell, PowerShell, SQL, XML, Git, Jenkins, Apache Tomcat, JVM tuning

**Compliance Support:** SOX ITGC logical access controls, HIPAA, access review evidence and campaign reporting

## PROFESSIONAL EXPERIENCE

---

### sympplr

Senior IAM Engineer

Hartford, WI (Remote)

Jun 2023 – Present

- Write and maintain 30+ custom IdentityIQ rules in BeanShell and Java, covering correlation, before and after provisioning, field value, identity attribute, and certification exclusion logic.
- Built custom connectors against REST API, JDBC, Web Services, and delimited file sources, plus SAP and Epic integrations, bringing 40+ applications under IdentityIQ governance.
- Ran the IdentityIQ 8.2 to 8.4 upgrade across DEV, QA, UAT, and PROD. Releases move through Git and Jenkins pipelines, with rollback tested in lower environments before each production window.
- Workday drives joiner, mover, and termination events into IdentityIQ, with downstream provisioning to Active Directory. Building those workflows took manual steps out of onboarding and shortened the gap between an HR termination and account disable, which had been leaving orphaned and dormant accounts behind.
- Cut the nightly aggregation and identity refresh cycle from roughly six hours to under four by tuning JVM settings, rewriting slow SQL, and reworking task definitions on Apache Tomcat.
- Built the RBAC model and ran role mining in IdentityIQ to consolidate redundant entitlements, and wrote the SoD policies and risk scoring that flag conflicting access between certification cycles rather than during audit prep.
- Configure quarterly manager, application-owner, and role-based certification campaigns. Completion has held above 95% within SLA, and campaign reports are used as evidence in periodic access reviews.
- Integrated IdentityIQ with ServiceNow so access requests are raised, approved, and fulfilled through the ticket workflow, which gives reviewers a request-to-provisioning trail.
- Review rule code written by other engineers, mentor junior team members, and maintain the team's IdentityIQ development standards.

### Discover Financial Services

IAM Engineer

Riverwoods, IL

Jun 2021 – Mar 2023

- Troubleshoot federation failures across the estate: SAML assertion errors, OIDC token claim mismatches, and Active Directory attribute synchronization problems. Worked from IdentityIQ logs and PowerShell queries against AD to isolate the cause and restore authentication.

- Onboarded SSO integrations for enterprise applications using SAML 2.0, OAuth 2.0, and OIDC, supporting authentication for 10,000+ users.
- Ran provisioning and deprovisioning across cloud and on-premises applications on the joiner/mover/leaver model, with a focus on shortening the interval between an HR termination event and access removal.
- Coordinated access certification campaigns and produced the campaign reports and evidence packages used in SOX access reviews.
- Worked with the security team on SoD policy definition spanning IdentityIQ and CyberArk PAM to detect high-risk access combinations before they reached production.
- Supported SailPoint cloud governance integration with AWS and Azure workloads, extending visibility past on-premises applications.

## Target Corporation

IAM Engineer

Minneapolis, MN

Mar 2018 – Feb 2021

- Integrated IdentityIQ with CyberArk to onboard privileged accounts for 20+ retail applications and route just-in-time elevation requests through IdentityIQ.
- Configured SoD rule policies that flagged conflicting access in financial and inventory management systems, and gave auditors the violation detail ahead of remediation deadlines.
- Built HR-driven lifecycle automation and RBAC role structures covering store operations, merchandising, and corporate IT.
- Deployed and configured IdentityIQ for retail, supply chain, and corporate systems.
- Connected SaaS applications through REST API and SCIM, and supported early IdentityNow adoption for visibility into cloud application access.

## CERTIFICATIONS

---

SailPoint Certified IdentityIQ Engineer

CyberArk Defender

Microsoft Certified: Identity and Access Administrator Associate (SC-300)

CompTIA Security+

## EDUCATION

---

**Master of Science, Cybersecurity Operations**

2017

Webster University, St. Louis, MO

**Bachelor of Science, Computer Science and Information Technology**

2015

Tribhuvan University, Nepal
